Brightleaf Solutions Recognized as one of the Top 20 Tech Companies

Bestowed for its efforts to provide AI based semantic data extraction services, by SiliconIndia

Brookline, MA – Brightleaf Solutions, Inc., a leading provider of contract abstraction and analytics solutions, was recognized by SiliconIndia, a prestigious technology publication in India, as one of the top 20 tech companies. The list comprises the 20 Most Promising Technology Companies founded by Indians in the U.S, involved in addressing the current needs of enterprises which have the potential to be or are already market leaders.

Samir Bhatia, CEO of Brightleaf said, "We are honoured to be selected by SiliconIndia as one of the top 20 tech companies. Brightleaf's extraction engine uses natural language and semantic intelligence technology to learn and pattern the information that needs to be extracted from different types of documents helping companies overcome the challenges of mining important information from structured, semi-structured and most importantly, unstructured documents."

With its own proprietary semantic intelligence/natural language processing technology and team of legal and financial experts Brightleaf takes the pride of serving some of the biggest organizations across the globe.

"Brightleaf provides a very innovative and cohesive solution to one of the most painstaking problem faced by companies in understanding their customer and vendor relations. The important information concealed in the contracts and documents can help companies uncover hidden patterns and results. Brightleaf understands the importance of extracting this information with utmost accuracy and provides a solution to derive this data with technology powered approach coupled with a very special touch of human intelligence." said Sagaya Christuraj, Managing Editor, SiliconIndia.

"Extracting the data attributes from unstructured text in contracts has always been a tedious and unreliable task. Brightleaf overcomes this challenge by taking out imperative information from unstructured, text-based legal documents and making it portable into any database program for analytics, triggers and queries." added Samir. "Because Brightleaf is completely focused on extraction with its software and team of lawyers, we deliver every engagement at Six Sigma quality levels. Most of the work is done by our software, but our team verifies each and every data element that is extracted, to reach such accuracy levels."

Data has changed the way companies are operating their business in this highly competitive and challenging environment. The ever increasing amount of dynamic data is becoming too much for human processing and analysis. There is so much of data being produced that without the help of an automated system this scattered data may not mean anything and cannot be put into good use. Analyzing this data can help companies and

management uncover hidden patterns and identify new opportunities. Brightleaf's customized solutions, a combination of artificial and human intelligence help its clients make best use of extracted data which can be then uploaded onto any enterprise level system. ABOUT BRIGHTLEAF SOLUTIONS, INC.

Brightleaf provides a technology powered service to extract information from your contracts using our own proprietary semantic intelligence/natural language processing technology, our own team of lawyers to check the output, and our own Six-Sigma process to deliver end-to-end, highly accurate, extracted data from your contracts.

The data can be virtually anything, and it is customized for each of your type of contracts. All meta-data, terms and conditions, legal provisions, and even all obligations (which are usually scattered throughout your contracts) are extracted by our software. This extracted data is checked by our team of lawyers, and provided in a format for easy upload into any system, such as a Contract Lifecycle Management System (CLM), for tracking and reporting ([download Strategy Brief](#)).

This allows you to leverage the knowledge in your existing contracts, report on the extracted data, even recover hidden revenue (e.g. by policing penalty clauses in your supplier agreements) and comply with current and upcoming regulations.

Brightleaf was voted one of the top five data mining companies, and the only one in the legal space.
