Brightleaf Solutions recognized by SiliconIndia as one of the Top 5 Data Mining Companies

Offering unique, state-of-the-art technology to extract highly accurate information from contracts

Brookline, MA – Brightleaf Solutions, Inc., a company that provides technology powered services to overcome the challenge of mining important data from unstructured documents, was recognized by SiliconIndia, a prestigious technology publication in India, as one of the top five data-mining companies. Selected as one of the top and the only company, focused in the legal space, gives a strong statement to companies who are looking to extract meta data, legal provisions, terms and conditions and even obligations from contracts, that there is a radically new technology based approach to solve this problem.

Samir Bhatia, CEO of Brightleaf, said, "We are honored to be selected by SiliconIndia as one of the top five data mining companies. Our state-of-the-art software engine uses natural language and semantic intelligence technology and coupled with artificial intelligence paradigms, to do a "bulk of the heavy lifting" to extract information from legal documents. This, then wrapped with a team of highly trained and focused legal, financial and business experts and a stringent six-sigma process, to deliver highly accurate results to clients looking to organize their contacts and gain insight to the wealth of information in them."

Samir added, "Many organizations are still providing the service using people who use traditional file based searches (CNTRL-F) to look for, for example, 'termination', in the document, and cut and past the values into a spreadsheet. This is highly error prone, expensive and time consuming. We are very excited that SiliconIndia has recognized t chosen us as the only company in the legal space to finally break an archaic way doing this work."

"I am amazed by the level of innovation and creativity that Brightleaf Solutions brings to the fore. This is why the company has been recognized as one of the Top 5 Data Mining Companies in India. We are happy to recognize them for their great contribution and dedication they take to deliver abstract data at Six Sigma-level." said Anamika Sahu, Managing Editor, SiliconIndia.

Contracts are either negotiated on company paper, or on third party paper. This does not deter Brightleaf's software engine that can work on any document, text based or image based. Brightleaf transform these files into text based documents using Optical Character Recognition software, pass it through the proprietary software engine, and follow it up with lawyers who use a six sigma process to extract information from these unstructured documents. The end-to-end service provided to clients can extract any meta-data elements, legal provisions, term and conditions, and even obligations from these contracts (attributes), and organize them into a structured database for triggering and for performing smart queries. Typically uploaded into a Contract Lifecycle System, this extracted data is used to increase the adoption and effectiveness of the system, recover revenue (e.g. extract and

police penalty clauses in their supplier contracts), adhere to compliance and suffice all reporting requirements for general business operations. Click on the link to view the list of [Top 5 Data Mining Companies](#)

ABOUT BRIGHTLEAF SOLUTIONS, INC.

Big data, BI, and data driven decisions are having a profound effect on U.S. business operations, becoming a $143B market in 2016. Brightleaf's vision is to accelerate this adoption with technology that overcomes the challenge of mining important information from unstructured, text-based documents and making it accessible.

Brightleaf Solutions is a minority-owned, Boston-based technology company. With an initial focus on executed legal contracts, Brightleaf opens new doors for companies to manage risk, ensure regulatory compliance, meet customer obligations, uncover missed revenue, and get meaningful insight into their customer, partner, and vendor behavior.
