Brightleaf Expands AI-Powered Contract Extraction Engine with Multilingual Capabilities

Enhanced engine supports extraction from contracts in French, German, Italian, Spanish, Portuguese and other European languages

Brookline, MA – Brightleaf Solutions, Inc., a leading provider of AI-powered contract data extraction and analytics, today announced the expansion of its AI-powered contract extraction engine to support contracts in French, German, Italian, Spanish, Portuguese, and other European languages.

The enhanced capability enables Brightleaf to process multilingual contract repositories through an AI-driven workflow that begins with document preprocessing and data cleanup, then progresses to the extraction of key contractual information.

For organizations managing contracts across multiple countries and business units, language diversity is often accompanied by another challenge: contract repositories can contain duplicate files, irrelevant documents, scanned agreements, and documents in formats that are difficult to process. Preparing this information before extraction is an essential part of building a reliable contract data set.

Brightleaf's extraction engine incorporates preprocessing capabilities designed to clean and prepare contract repositories before information is extracted, including:

- De-duplication to identify duplicate documents and reduce redundancy
- Removal of irrelevant documents to help isolate contracts relevant to the extraction scope
- OCR processing to convert scanned and image-based documents into machine-readable content

This preprocessing stage helps transform an unstructured document repository into a cleaner, more suitable input for automated contract data extraction.

Once documents have been prepared, Brightleaf's AI-powered extraction engine processes the content and identifies the key information defined for extraction. The extracted data is then converted into structured contract information, helping organizations analyze, migrate, and manage large and complex contract repositories more easily.

"Contract repositories are rarely uniform," said Samir Bhatia, CEO of Brightleaf Solutions. "They can contain contracts in multiple languages, different document formats, duplicates, scanned files, and information that may not be relevant to the project. By expanding our AI-powered extraction engine to support additional European languages, and by strengthening document preprocessing and cleanup, we're able to address these challenges as part of the extraction process itself."

The multilingual enhancement reflects Brightleaf's broader approach to contract data extraction: rather than focusing solely on extracting text from documents, the technology is designed to address every step required to transform large document collections into structured contract information.

The addition of multilingual capabilities allows Brightleaf to support a wider range of global contract repositories and projects where agreements span multiple European languages. For organizations consolidating contracts following acquisitions, migrating legacy agreements into a CLM platform, or seeking greater visibility into their contract portfolios, the ability to process multilingual documents can significantly reduce the complexity of working with diverse source repositories.

"Expanding language capabilities is one part of the evolution of our extraction engine," Samir added. "Our broader objective is to make it easier to take large volumes of real-world contract documents — with all their differences in language, format, and quality — and turn them into structured information that organizations can actually use."

ABOUT BRIGHTLEAF SOLUTIONS, INC.

Brightleaf provides a technology-powered service to extract data from your contracts with extreme accuracy using our own proprietary AI/Semantic Intelligence/Natural Language Processing technology, our team of lawyers to check the output, and our Six Sigma process.

Your legacy contractual documents, along with this extracted metadata, can be migrated into a Contract Lifecycle Management (CLM) system for tracking and reporting. This greatly enhances the value of your investment in the system. The data can be virtually anything, and it is customized for each of your types of contracts. All metadata, terms and conditions, legal provisions, and even all obligations (which are usually scattered throughout your contracts) are extracted by our software. Our team of lawyers checks each-and- every extracted data point against the original documents using a stringent Six-Sigma quality process, which delivers highly accurate results.

Brightleaf gets recognized very often, including "Company of the Year" as a Contract Management Services provider. Details of this and other recognitions and awards can be found at www.brightleaf.com/awards-recognitions
